

Setting up MySQL in MySQL Workbench 6.0

MySQL Bench GUI tools to develop databases

Requires a Connection to MySQL server to deploy

Allows configuration, queries, develop data models
migrate data, set up security/privileges

Open Workbench

create new connection, double click connection

create new schema (dog_schema)

execute creation of schema

double click dog_schema in left panel (under Schemas)

create Table, add columns as necessary

Apply to create table

Click on new_table (under schema)

click on import in the middle bar

Access MySQL from MAMP

/Applications/MAMP/Library/bin/mysql -u astuart -psecret database_name

PHP Errors are in

/Applications/MAMP/logs

Bitbucket/GitHub

create repository from Webpage

create ssh key if needed

push repository up to cloud
